RE: CAPACITY TEST ON AQD#48-CALCINER #3

Mr. Gribovicz:

The purpose of this letter is to request a process rate capacity test on Solvay Minerals' Calciner #3-AQD #48.

The capacity test will be conducted during the month of May 1997. Emissions will be tested during the capacity test utilizing the following EPA Reference Methods:

- 5/202 for particulate,
- 18 for HAPs,
- 25A for VOCs minus the methane/ethane fraction,
- 7 for NO_x,
- 10 for CO.

At the end of the test period, Solvay Minerals will submit a test report detailing process operating conditions, peak and average throughput rates, and emission testing.

If you have any questions regarding this capacity test, or require more information, do not hesitate to call me at (307) 872-6570.

Sincerely,

Timothy Brown
Environmental Technician
